Senior Frontend Engineer with 10+ years of experience building scalable web applications, frontend architecture, and reusable UI component systems platforms across modern JavaScript stacks. Strong background in React, TypeScript, Vue, JavaScript, HTML, CSS, APIs, Agile/Scrum, technical mentorship, and cross-functional product delivery.

Professional Experience

Senior Frontend Engineer | AKQA (vendor at Apple) - Sunnyvale, CA | Jan 2018 – Jan 2026

- Architected and led development of Apple's marketing email platform, replacing manual HTML coding with a reusable, scalable UI component system and reducing email development time by 50%.
- Modernized preexisting Vue/JS application to React and TypeScript by refactoring the whole codebase, with emphasis on improving component architecture, optimizing state management, strengthening frontend scalability, and aligning code with the latest Apple infrastructure standards.
- Built a responsive HTML/CSS export pipeline with Vanilla JavaScript to generate optimized, cross-client email markup across major clients and viewports, reducing production QA time by 90%.
- Designed frontend integrations with APIs, email marketing platforms, digital asset management systems, and cloud services to streamline content workflows and improve team efficiency.
- Led a development team of 4 and partnered with product managers, designers, QA, and stakeholders in Agile/Scrum environments to deliver frontend features while balancing technical debt, production support, and bug backlog.
- Owned end-to-end email development for executive-led campaigns, translating PDF and Figma designs into pixel-perfect HTML under tight timelines and evolving requirements.
- Documented frontend architecture, coding standards, onboarding guides, and technical design decisions to support maintainability, team scalability, and consistent engineering practices.

Freelance Developer | Self Employed - Manila, Philippines | May 2016 – Oct 2017

- Delivered the end-to-end experience for a job board for BPO companies that allowed jobseekers to browse hundreds of jobs, and supported same-day signups and applications, and connected employers with candidates.
- Generated data analysis reports to determine high traffic sites that allowed the company to allocate resources more efficiently and target under contested sites.

Senior Software Engineer | OnSite.com (acquired by RealPage, Inc.) - Campbell, CA | Jul 2013 – Jan 2016

- Created and managed dynamic lease agreement pages, landing pages and leasing documents using XML, HTML, CSS and Java within a SaaS property-management platform.
- Led efforts to improve automation processes and application performance using JavaScript and jQuery for complex rental calculations and customized interactive experiences within the client platform.

Software Engineer | OnLive, Inc. - Palo Alto, CA | Jul 2010 – Aug 2012

- Designed and prototyped a testing suite in Excel and Visual Basic and converted it to a web-based dashboard utilizing the Yii framework, jQuery, PHP and SQL, enabling executives and marketing teams to monitor video game compliance test pipelines in real time and generate reports.
- Built and maintained a RESTful API and a scalable RDBS to support thousands of test entries across hundreds of games.

Languages, Applications, Technologies & Tools

- JavaScript, TypeScript, HTML, CSS, SCSS, PHP, SQL, XML, XSLT
- Claude Code, ChatGPT
- React, TypeScript, Vue, JavaScript, jQuery, Handlebars, Bootstrap, Tailwind, Apple SASSKIT
- Node.js, Webpack, Git, Jenkins, Jira, Browser DevTools, Vercel
- VS Code, Sublime Text, Adobe Photoshop, Figma

Education

Bachelor of Science in Computer Science: Computer Game Design - University of California, Santa Cruz – 2005-2009
