Skills

Languages: JavaScript, TypeScript, HTML5, CSS, SCSS, PHP, SQL, XML, XSLT, JSON, jQuery

AI Tools: Claude Code, ChatGPT

Frameworks/Libraries: React, Vue, Handlebars, Bootstrap, Tailwind, Next.js, Jest

Development Tools: Node.js, Webpack, Git, Jenkins, Jira, Browser DevTools, Vercel

Other: Agile/Scrum, CI/CD, RESTful APIs, VS Code, Sublime Text, Adobe Photoshop, Figma

Professional Experience

Senior Frontend Engineer | *AKQA (vendor at Apple) - Sunnyvale, CA* | Jan 2018 – Jan 2026

- Built the front-end features and design architecture of Apple's marketing email creation tool using React and TypeScript, replacing manual HTML coding with an intuitive user-friendly interface that reduced email development time by 50% and supported 300+ marketing campaigns.
- Decreased QA time from 3 weeks to 1 week by building an export pipeline with Vanilla JavaScript to convert modern HTML/CSS to low-level, production-ready email markup across major clients and international locales.
- Led efforts to refactor the codebase from Vue to React, restructuring the component architecture and creating a more responsive and accessible codebase and resulting in a 40% reduction in production HTML file size.
- Integrated internal APIs to allow seamless interaction across different platforms, consolidating 80% of the manual tasks involved with email campaigns into a single application.
- Owned end-to-end email development for executive-led campaigns, translating PDF and Figma designs into pixel-perfect content under tight timelines and rapidly evolving requirements, contributing to massive increases in customer and media engagement.
- Partnered with product managers, designers, QA, and stakeholders in Agile/Scrum environments to deliver new features monthly while balancing technical debt, production support, and bug backlog.
- Documented testing suites, coding standards and code review guidelines, onboarding processes, and technical design decisions to support quality, scalability and consistent engineering practices.

Software Developer | *Freelance - Manila, Philippines* | May 2016 – Oct 2017

- Owned the end-to-end development for an online job board for BPO companies that allowed jobseekers to browse hundreds of jobs online, supported same-day signups and applications, and generated 30% more candidates for high-profile clients.
- Generated data analysis reports to determine high traffic sites that allowed the company to make more informed resource allocation decisions, doubling headhunter efficiency.

Senior Software Engineer | *OnSite.com (acquired by RealPage, Inc.) - Campbell, CA* | Jul 2013 – Jan 2016

- Created and managed dynamic lease agreement pages, landing pages and leasing documents using XML, HTML, CSS and Java within a SaaS property-management platform.
- Led efforts to improve automation processes and application performance using JavaScript and jQuery for complex rental calculations and customized interactive experiences within the client platform.

Software Engineer | *OnLive, Inc. - Palo Alto, CA* | Jul 2010 – Aug 2012

- Designed and prototyped a testing suite in Excel and Visual Basic and converted it to a web-based dashboard utilizing the Yii framework, jQuery, PHP and SQL, enabling executives and marketing teams to monitor video game compliance test pipelines in real time and generate reports.

Education

Bachelor of Science, Computer Science: Computer Game Design – University of California, Santa Cruz – 2005-2009

Dale Carnegie – Leadership Training for Managers - 2017
