EXPERIENCE

Senior Frontend Developer, AKQA (on-site @ Apple), Sunnyvale, CA

Jan 2018 – Jan 2026

- Contributed to the design and development of innovative web based experiences with React and TypeScript throughout Apple's marketing ecosystem.
- Led UI/UX development of an expansive desktop application that featured a reusable component design system that allowed users department-wide to produce customer facing production work with ease and eliminating errors across different rendering environments and locales. First built in Vue and later updated to React.
- Collaborated with backend engineers to define and improve API requirements and hook them up for easy integration with other marketing platforms.
- Worked cross-functionally with UX designers, program managers, quality assurance in an agile development environment to prioritize and deconstruct feature tasks, handle bug fixes, and coordinate version releases.
- Presented features and new workflow processes the application provided in monthly demos and Developer Symposiums.
- Transformed PDF and Figma mockups and design to pixel-perfect implementations for customized invitations for press conferences and supplemental material for new and existing Apple product consumers.
- Maintained documentation and built processes for training new hires, establishing coding standards and defining team processes to ensure seamless day-to-day workflow.

Freelance Developer, Manila, Philippines

May 2016 – Sept 2017

- Created an online job portal using CodeIgniter and MySQL for a client supporting hiring efforts for Business Processing Outsourcing companies and jobseekers, focusing on accessibility, scalability, and simple user experiences.
- Created social media marketing and website promotion materials to establish client's online presence and increasing headhunter efficiency.

Senior Design Engineer, RealPage, Campbell, CA

July 2013 – Jan 2016

- Using Java, jQuery, XML, and XSLT set up and managed dynamic leasing documentation creation within the SaaS property-management platform.
- Coordinated with high-profile clients to convert complex configurations and UI workflows into intuitive and customized user experiences.
- Mentored junior developers through personal training sessions and development walkthroughs.

Software Engineer, OnLive, Inc., Palo Alto, CA

Jul 2010 – Aug 2012

- Promoted to developer to convert Certification Test Suite to a web based application using PHP, Yii, and MySQL, allowing certification testing to be performed online and have results be accessed via dashboards and analytic reports by internal stakeholders to support scalability of game builds and ramp of certification testers.
- Integrated command line SVN processes to promote clean, consistent code between a small development team.

Game Certification Test Lead, OnLive, Inc., Palo Alto, CA

Mar 2010 – Jul 2010

- Created a Certification Test Suite using Visual Basic to automate certification processes, defining hundreds of test cases and collaborating with engineers to define end-to-end compliance and functionality requirements.
- Oversaw the certification testing process of over 30 games from beta to launch, paying close attention to video quality, performance and overall platform functionality.

EDUCATION

B.S. Computer Science: Computer Game Design, University of California, Santa Cruz

2005-2009

SKILLS + TOOLS

Stack: HTML5, React, JavaScript, TypeScript, CSS, SCSS, Vue, Node.js, Next.js, Redux, MySQL, PHP, Handlebars, Java

Workflow: JIRA, GitHub, Agile Development, Scrum, Kanban, Box, SVN, CI/CD automation

AI Tools: Claude Code, Microsoft CoPilot, ChatGPT

Creative Tools: Adobe Creative Cloud, Figma
