Senior Software Engineer with 10+ years building modern front-end applications, leading a Vue-to-React migration, and integrating internal APIs and increasing productivity for business practices. Experienced with working cross-functionally with product and QA to ship reliable, performant deliverables on tight timelines, with a strong foundation in collaborative workflows, component-driven architecture, and JavaScript best practices. Passionate leader who emphasizes strong teamwork and building new skills.

EXPERIENCE

Senior Frontend Developer Jan 2018 – Jan 2026

AKQA (Apple) - Sunnyvale, CA

- Led a team of 4 to build Apple's internal marketing email creation tool, enabling Marketing Communication users of all technical skill levels to compose production-ready marketing materials seamlessly, directly supporting 500+ marketing campaigns.
- Using modern frameworks, implemented the front-end facing platform through a Swift-backend to seamlessly build email templates using interactive and customizable UI components with focuses on accessibility and responsive design to cut development time by 30%.
- Built scripting tasks in Vanilla JS to convert modern code to standardized low level code that was compatible across major email clients globally, reducing QA rounds for production code by 90%.
- Executed a full codebase migration from Vue to React and TypeScript, refactoring the component hierarchy, modernizing state management, and delivering a more maintainable, scalable foundation without interrupting ongoing campaign production while syncing up with Apple's infrastructure.
- Integrated asynchronous REST API integrations with Apple's email broadcast and asset deployment platforms to streamline the complete development lifecycle.
- Coordinated with product management and quality assurance in an Agile/scrum environment to reprioritize bug backlog against feature work weekly, keeping production stability high without slipping delivery commitments.
- Owned the end-to-end email development lifecycle for executive-led campaigns, serving as the primary engineer for handling marketing events tied to time-sensitive Apple products and announcements, turning PDF design mockups into pixel-perfect HTML implementation under large time constraints and vague requirements.

Freelance Developer / Entrepreneur May 2016 – Oct 2017

Self Employed - Manila, Philippines

- Delivered the end-to-end experience for a job board for BPO companies using CodeIgniter, PHP, and MySQL.
- Onboarded clients and increased candidate counts from hundreds to thousands within six months of launch, generating a 20% increase in company revenue.
- Created data analysis reports for jobseeker info to target optimal locations for headhunting, doubling the average candidate count per headhunter.

Senior Software Engineer Jul 2013 – Jan 2016

RealPage - Campbell, CA

- Automated the generation of hundreds of online lease agreement pages using XML and Java within a SaaS property-management platform.
- Improved automation via advanced scripting for rental calculations and database optimizations for the New York region, which had the company's top clients.
- Mentored junior frontend developers through structured 1-on-1 sessions and documentation, improving team-wide adherence to coding standards and accelerating onboarding.

Software Engineer Jul 2010 – Aug 2012

OnLive, Inc. - Palo Alto, CA

- Prototyped, designed, and built an internal QA web-based dashboard, enabling executives and marketing teams to monitor video game compliance test pipelines in real time.
